For DDC engine controls, Band 1 is the limit for lower transmission gears (e.g., gears 1 - 3 on a 9- or 10-speed transmission). Band 2 is the limit for mid-range transmission gears (e.g., gears 4 - 7 on a 9-speed transmission). Band 3 is used for the transmission's highest one or two gears. MPH limits should be calculated using actual transmission gear ratios using the formula: MPH Limit for Band=(RPM Limit x 60) / (Tire Revs per Mile x Rear Axle Ratio x Transmission Gear Ratio). 4. For best vehicle performance, the RMP limit for Band 1 should be set lower than or equal to the RPM limit for Band 2. 5. Progressive Shifting is NOT AVAILABLE for use with Automated Mechanical Transmissions. 6.
