

JANUARY 2009

An Enduring LEGACY

From its humble beginning as the creator of the “Badger Crane” in 1939, Graber has evolved into one of the leading drapery hardware manufacturers of the 21st century. The Graber family founded the company on principles of quality and innovation. That simple approach lives on today.

A Commitment to QUALITY

Our commitment to quality is steeped in tradition. Whether it’s inspiration you seek or innovation you crave, energize your creative spirit with the Drapery Hardware Collection.

HARDWARE SELECTION GUIDE

The purpose of this guide is to assist in the selection of the Graber® hardware needed for a given window treatment. For many treatments, you have a variety of rods and accessories to choose from. Product selection is made on the basis of finish, design styling, operating characteristics, drapery weight, and installation requirements. If desired, it is also possible to assemble a custom rod from component parts for selected treatments.

GETTING STARTED

The placement and type of drapery hardware depends on the look you wish to create. Rod placement and type determines the width and length of the draperies needed. The information presented below are only general guidelines. Consult your workroom, installer, sales representative, instruction sheets, or fact sheet for specific information.

ROD WIDTH - GENERAL GUIDELINES

	CONVENTIONAL TRAVERSE ROD	DECORATIVE TRAVERSE ROD	CAFE ROD	SHIRRED ROD OR POLE
				
MEASURING STARTING POINT:	Top of rod	Bottom of rings	Bottom of rings	Top of header or top of rod (no header)
ROD PLACEMENT GUIDELINE:	4" above edge of glass	4-5" above edge of glass	4-5" above edge of glass	4-8 1/2" above edge of glass; rod width clears edge, allows for supports
DRAPERY LENGTH:	The distance from the finished top edge to the finished bottom edge of the drapery panel			
FINISHED LENGTH:	Final top to bottom length of treatment including allowances for rod take-up, poufs, etc. Allowances are added to drapery length to determine finished length.			
TAKE-UP:	Distance the drapery is shortened when shirred through a rod pocket; see quality notes on take-up on page 18.			

STACKBACK:	The amount of space required to completely draw open the drapery to clear the glass. A general rule is to add 1/3 of window width to allow for total stackback.
ROD WIDTH:	Width of window plus total stackback

DRAPERY WIDTH - GENERAL GUIDELINES

TWO-WAY CONVENTIONAL TRAVERSE

DRAPERY FINISHED WIDTH:	Finished Width = Rod Width + Overlap + Returns
OVERLAP:	The part of the drapery panel which rides the master carrier and overlaps the other drapery panel in the center when the drapes are closed. A general rule is to allow 2 1/2"-3 1/2" per drapery panel on a two-way draw traverse rod. Overlap allowance not needed for one-way draw or shirred pocket installation. Consult workroom for specific guidelines.
RETURNS:	The amount of drapery that covers the distance from the face of the rod to the wall. A general rule is to add 1/2" to projection to avoid fabric binding. Exact return distances are given for each Graber® traverse rod.
FULLNESS:	Fullness defines the amount of fabric that is pleated or shirred for a given drapery finished width. Treatment fullness can be expressed as a percentage (e.g. 100%) or a ratio (e.g. 2 to 1). Fabric weight and personal preference determine fullness. Consult workroom for specific guidelines.
PROJECTION:	Distance from the wall to the front of the rod.
CLEARANCE:	Distance from the wall to the back side of the rod.

QUALITY NOTES

BALL BEARING END PULLEYS

- Featured in: Super Heavy Duty rods.
- Designed for long life and minimum draw force.
- Operate smoothly and quietly.

ADJUSTABLE-REVERSIBLE MASTER CARRIER

- Featured in: Super Heavy Duty rods.
- Vary drapery overlap on either master base. Overlap arm locks securely into one of six positions.
- Reverses for one-way conversion with the adjustment of a single screw from front of rod.

SUPER HEAVY DUTY TRAVERSE ROD (0-600 Series)

- Strong .0165 gauge steel with contour tapered profile allows draperies to hang neater and provides smooth operation on the longest extensions.
- Rod edges are deburred and rounded for smooth traversing.
- Laced with continuous #3¼ braided cord.
- Ceiling or wall mount options.

QUALITY NOTES

BATON DRAW TRAVERSE (0-443-1)

- Easy installation.
- No cords for improved child safety.
- Durable steel reversible master carriers.
- Baton is hidden behind the leading edge of drapery.
- Easy operation.

0-443

HEAVY DUTY TRAVERSE ROD (0-400 Series)

- Heavy .0165 gauge steel provides slim profile, contoured rod with strength and durability.
- Laced with heavy duty braided cord.

DEPRESS GATE

SLIDE GATE

- Featured on all Graber® conventional traverse rods. Gate returns to closed position automatically.

UNIVERSAL CAM-LOCK STIRRUP

- Featured in: Heavy Duty and Super Heavy Duty Rods
- Interchangeable for inside or outside rod sections.
- Locks securely with a twist of a screwdriver. (1) Open position – for inserting rod. (2) Closed position – for locking inside section. (3) Closed position – for locking outside section.

Traverse Sheer Rod Kit (0-781-1) - Converts the existing Graber® conventional traverse rod into a traverse and sheer rod combination. Fasten sockets onto the traverse rod brackets.

Extender Valance Kit (0-801-1) - Allows a Graber curtain rod to be mounted in front of a Graber traverse rod. Kit contains 3" projection brackets and two wire supports.

Double Traverse Rod Kit (0-803-1) - Combines two adjustable traverse rods to make a single double traverse rod. Fits all Graber traverse rods. Projects: 2-3¼" inner, 5¼-6½" outer.

Traverse & Sheer Rod Kit (0-804-0) - Contains two sockets that fasten to all Graber traverse rod brackets.

Brackets - End brackets fit all traverse rod series.

Additional accessories in Sections 5, 6 & 7.

See Page 12 for recommended traverse rod weight limits.

See Page 83 for restringing, converting to one way draw, and multiple draw cord diagrams.

QUALITY NOTES

FRONT-LOADING END BRACKETS

- Featured on all Graber conventional traverse rods.
- Design permits mounting close to ceiling.
- Rod locks automatically into brackets.
- Locking trigger depresses for release.
- Brackets are universal, right or left.
- Distance from top hole in bracket to top of rod is ¼".
- For ceiling mount, insert screws through top flange. Use end bracket for return.
- Adjustable projection.

CENTER SUPPORT BASE

- Bottom of base is scored and can be removed to fit narrow casings.
- Bracket base can be bent to conform to rounded casings.

TRAVERSE CORD

- Cord is tested for 10,000 cycles.
- Cord will not fray in normal use.
- Braided polyester cord for extra strength and minimum stretch.
- Minimum breaking standard is 130 lb. on No. 3/4 cord.

TRAVERSE ROD PINSETTINGS

Pinsetting is the distance from the top of the hook to the top of the heading.

RECOMMENDED WEIGHT LIMITS FOR TRAVERSE RODS

Super Heavy Duty:	Up to 84" – 1½ lbs. per foot; with two or more center supports – 2 lbs. per foot Over 84" – 1 lb. per foot; with two or more center supports – 1½ lbs. per foot
Decorative:	Up to 84" – 1½ lbs. per foot Over 84" – 1 lb. per foot
Heavy Duty:	Up to 84" – 1 lb. per foot; with two or more center supports – 1½ lbs. per foot Over 84" – ½ lb. per foot; with two or more center supports – 1 lb. per foot
Regular:	All Sizes – ½ lb. per foot (using a sheer or very lightweight fabric)

QUALITY NOTES

TRAVERSE ROD TERMS

- Rod width** is measured from outside of end bracket to outside of end bracket.
- Return** is the distance needed for the drapery panel to cover the rod projection from the wall. Returns may vary according to work-room standards.
- Projection** is the distance from the wall to the front of the rod.
- Overlap** of the panel occurs when the drapery panels are drawn closed.
- Rule of Thumb:** Drapery should be 12" wider than rod width to allow for returns and overlap on the two-way rod.

DRAPERY TIPS

Hanging Drapery:

- Hang panels starting from master carrier.
- Pinch hook tight on master carriers to prevent hangups or snags.
- Don't skip slides. Slide extras to end of rod to remove through gate.

1-Return: The fabric which follows the bracket back to the wall.

2-Overlap: The fabric on by-passing master carriers.

DRAPERY TIPS (cont.)

Training Drapery:

- To help a pleated drapery stack neatly, crease or "break" the stiffened heading between the pleats by folding the space between each pleat in half and running your thumb and forefingers up and down the buckram, thereby "creasing" the buckram.
- For a conventional traverse rod, crease the buckram away from the rod, towards the room.
- For a decorative rod with rings, fold and crease the buckram back towards the wall and away from the room.
- Traverse the draperies to their stacked, open position, smooth the pleats and folds, and loosely tie with cloth strips in two or three places. Let stand two-three days, then untie. Draperies should now traverse and stack neatly and smoothly.

QUALITY NOTES

DRAPERY RETURN

The proper drapery return allows the last pleat to face forward. When using decorative rods, the first rings on the left and the right sides of the rod are **outside** of the brackets. Because of this, add one additional inch to each side of your bracket-to-bracket measurement, then add your returns and overlaps.

CENTER SUPPORTS are hidden behind the rod for a clean finished appearance.

COMBINATION DECORATIVE AND CONVENTIONAL BRACKETS

Special combination brackets are available to assist in the installation of multi-layered drapery treatments. **Be sure to order decorative and conventional brackets for each end bracket and support.**

Decorative and Conventional Traverse

FINISHED DRAPERY LENGTH is measured from the bottom of the rings to the desired length of the drapery panel. When drapery length is known, use bracket dimensions to determine mounting location.

BRACKET & SUPPORT CHART			
Rod Width	# End Brackets	# Center Supports	# Combination Brackets
28–48"	2	0	2
38–66"	2	1	3
48–84"	2	1	3
66–120"	2	2	4
84–156"	2	3	5
130–240"	2	5	7

- Slide Ring** – strong molded construction. Wide buttons glide smoothly and silently.
- Inside Rod Section** – telescopes for easy adjustment.
- Outside Rod Section** – rod sections of .0165" gauge steel are roll-formed to precision tolerances.
- Finials** – distinctive classic designs; molded to coordinate with rod styles and colors; vacuum metallized to match rod finish.
- End Brackets** – fit rod contours perfectly; small raised nib fits hole in rod section for precise location.
- Hidden Bracket** – No set screw; holds rod firmly in place.
- Overlap and Underlap Arm** – master slide arm adjusts to three positions for exact drapery overlap fit.
- Cord Tension Pulley** – keeps cord taut. Hinged base for floor or wall mounting. Furnished with all Decorative Traverse Rods.
- Slide Gate** – permits easy removal or addition of slide to rod.

FINISH: Brass (8)

Use with 1" & 1½" rods.

See page 39 for rings and clips.

QUALITY NOTES

CAFE ROD WIDTH is measured from bracket to bracket. **MEASURING FINISHED LENGTH: CAFE RODS** – When the drapery heading starts below the rod, the starting point for measuring finished length is at the bottom of the ring.

Note: Rod height will vary based on rod diameter and ring size.

WINDSOR SWAG C RINGS

2-528 make it easy to create swag and cascade treatments.

- Fabric scarf lifts into place from back of C-ring.

- To hold fabric tight, insert fabric into back clip. Press tightly into place. **No hook and loop tape required.**

- Tuck fabric into C-ring fingers to create crisp, neat folds.

ROD POCKETS: TAKE-UP – When the drapery is shirred through a rod pocket, the drapery is shortened by a distance equal to thickness of rod.

Rod Size	Pocket	Take-up
1½" D-Profile Poles	2½–3"	1½"
1" Round	1½–2"	1"
¾"	1"	¾–1½"

RINGS AND CLIPS

Select ring or clip with an inside diameter (ID) ¼–½" larger than rod diameter to ensure easy traversing.

Rod Diameter	Ring ID (Inside Diameter)
¾" & ½"	¾"
Oval Rod ¾"	5/8" x 1½"
¾"	1"
1"	1¼"
1½"	1¾"

See page 39 for products and pricing.

NOTE: Weathered Black Gold (37) is a high quality, hand applied finish. Colors and patterns may vary. Mahogany (18), Matte Black (39), and Warm Oak (48) are furniture grade finishes.

Due to the nature of wood, parts may vary in color, mineral spots and grain patterns.

Wood Components – Purchase finials, poles, brackets, rings and accessories separately.

QUALITY NOTES

2" WOODWARE is designed for custom installations.

- Brackets available for 5", 6 1/2", 7 3/4", 8" and 11" projections.
- Matching plugs provided to conceal bracket installation screws.
- Can be used with sheer rod on page 11

MEASURING FINISHED LENGTH

The starting point is the place from which you measure the **finished length**. For pinch pleat draperies, the starting point is at the bottom of the ring (or top of headings). For shirred curtains, the starting point is the top of the rod pocket (or top of headings). Be sure to consider take-up and add that to the desired finished length.

Wood Components – Purchase finials, poles, brackets, rings and accessories separately.

QUALITY NOTES

BRACKET HEIGHT - PINCH PLEAT PANELS

Measure drapery length and add bracket allowance to determine location of top bracket hole.

Pole Diameter	Bracket Allowance
2"	3 3/8"
1 3/8"	2 3/4"

The **bracket allowance** is the distance from the drapery heading to the top bracket hole. **Remember to add floor clearance.**

BRACKET HEIGHT - SHIRRED CURTAINS

Measure curtain length from top of pole pocket to bottom hem and deduct take-up. Take-up is the distance the drapery is shortened when shirred through a rod pocket (equal to pole diameter). Measure up from the bottom; allow for clearance to determine pole height.

Pole Diameter	Rod Pocket Take-up
2"	4-4 1/2" 2"
1 3/8"	2 1/2"-3" 1 3/8"

FINISH: Natural (0), Matte Black (39), Warm Oak (48), Cherry (77)

NOTE: Due to the nature of wood, parts may vary in color, mineral spots and grain patterns. Unfinished Natural woods may accept paint and stain differently.

NOTE: Matte Black (39) and Warm Oak (48) are furniture grade finishes.

Wood Components – Purchase finials, poles, brackets, rings and accessories separately.

QUALITY NOTES

BRACKET HEIGHT - SHIRRED CURTAINS

Measure curtain length from top of pole pocket to bottom hem and deduct take-up. Take-up is the distance the drapery is shortened when shirred through a rod pocket (equal to pole diameter). Measure up from the bottom; allow for clearance to determine pole height.

Pole Diameter	Rod Pocket	Take-up
2"	4-4 1/2"	2"
1 1/8"	2 1/2"-3"	1 1/8"

QUALITY NOTES

CORNERS, BAYS
Wood poles can be mitered by customer to use in corner and bay windows, or wood pole return (elbow) can be used to join two poles in a corner.

HANGING DRAPERIES
Begin at the center of the window and work outward. Attach last pleat to ring outside the end bracket. Return fabric to wall through a cup hook attached to the bracket. Break pleats toward glass.

NOTE: One ring will be needed for each pleat, plus two rings for the leading edges. One pin is needed for each ring, plus four pins for the leading edges and returns.

QUALITY NOTES

SPECIALTY WINDOW

KITS include hardware, clear rodding and instructions for creating arch, oval, eyebrow and circular treatments.

SPECIALTY WINDOW KITS feature flexible Crystal Clearrodding that easily bends to the desired shape of window. Rod easily cuts to length with a hacksaw. Splice rods together to fit even the largest windows. Rod snaps into clear clips installed in the frame for a secure fit.

Kit includes:

- (1-2) 46" Crystal Clear Rod
- (5-10) Clear Mounting Clips
- (1-2) Rod Splice
- (1-2) 14" Strap
- (1-2) Strap Fastener
- Measuring/Sewing Guide
- Inside Mount Bracket/Outside Mount Bracket

Shirr top pocket over rod. Thread strap through bottom pocket to create circle.

Rod snaps into clear clips to fit shape of the window.

Gather fabric in center and pull through circle to create finished pouf.

ARCH ROD MOUNTING ACCESSORIES simplify the creation of arch window treatments. Clear center support clips are an unobtrusive part of the finished treatment. The splice will hold Crystal Clear rod in circular shape for use with porthole windows.

CRYSTAL CLEAR rods are a Graber® innovation. The Crystal Clear rods "disappear" under sheer and lace curtains. Curtain rods come with wire supports. Crystal Clear rods will not yellow or turn brittle with age. **Note: Rod dimensions same as 2½" projection lock-seam rods.**

See Crystal Clear Rodding on page 48.

Multiple kits can be combined to cover larger windows.

QUALITY NOTES

CRYSTAL CLEAR™ SASH ROD can be used for shirred lace or sheer curtains on windows or doors. Mounts inside or outside. Bracket projects ½". See page 40.

Inside Mount

Threader

.013 Gauge

LOCK-SEAM CURTAIN RODS are coated inside and out, with no exposed edges. Baked white enamel finish matches Graber® traverse rods.

The "lock-seam" design gives the curtain rod that **additional strength** needed for medium to heavy curtain fabrics. Threader attached to rod ensures smooth, no-sag shirring.

HEAVY-DUTY BRACKET provides greater support; prevents hole tear-out. Tapered prong prevents rod lift-out.

QUALITY NOTES

FROST DAUPHINE disappears under delicate lace and sheer wide pocket treatments.

BAY WINDOW DAUPHINE RODS feature flexible corner hinges and snap-in swivel end brackets for clean finished look.

CORNER HINGE can be used on 90° inside or outside corners.

SPRING TENSION DAUPHINE makes it easy to install inside mount wide pocket treatments. Snap-lock spring mechanism means that no brackets or tools are required.

QUALITY NOTES

CAFE CLIPS (5-721, 5-740, 5-760)

Zinc-plated metal clip-on rings for cafe rods and spring tension rods. Spring clip holds heading of drapery at each pleat without hooks or sew-on rings.

THE CORRECT RING OR CLIP can make the simplest cafe look elegant and ensure easy movement along the rod. The inside diameter of the ring should be ¼ to ½" larger than the diameter of the rod.

Inside Diameter Ring ID	Maximum Rod Diameter
¾"	½"
5/8" x 1½"	oval rod, 5/8"
1"	¾"
1¼"	1"
1½"	1½"

MOLDED CAFE RINGS WITH EYE

(5-810, 5-820, 5-840, 5-860) Designed for use with cafe rods, wood poles or tubing. Use with pin-on or slip-in hooks.

QUALITY NOTES

CORNICE BRACKET (8-593) is attached to ceiling; provides support for valance rod or cornice header.

ANGLE IRONS (8-594) used as support brackets for cornices and other drapery fixtures.

TENTER HOOKS (8-597) are sharp, brass-plated steel spikes with various installation uses in plaster and wood.

SCREW-EYE HOOK (8-598) may be used for attaching tiebacks.

BATONS (8-637, 8-644) protect hand drawn draperies from soiling, wear and tear.

BALL BEARING CORD TENSION PULLEY (8-648) is equipped with 1" ball bearing wheel and open pulley head for quick threading of cord. All steel for longer heavy duty installations.

MOLDED TENSION CORD PULLEY (8-655) features a pulley cover that swings open to load. Spring tension pulley head keeps cord taut and neatly organized.

QUALITY NOTES

METAL TIEBACK RING is used to hook tieback to tieback holder.

8-773

HEX HEAD SCREWS with washer heads are for general use with drapery hardware. Available in eight sizes. #6 screws are smaller in diameter to be used on brackets with smaller holes.

8-778

TEKS SCREWS require no pre-drilling and eliminate splitting or cracking of trim. Use on metal doors, aluminum window frames, and wood.

QUALITY NOTES

FLEX ROD - Takes the hassle out of traversing bay window treatments.

- Bends easily on site.
- Slides glide easily around 12" radius in PVC slide guide.
- Extruded aluminum rod.
- Preassembled rods are a timesaver for installers.
- Includes two master carriers.
- Recommended weight rating: 1 lb./ft.
- Minimum radius: 12"
- Maximum drapery weight: 16 lb.

CRYSTAL CLEAR ROD SECTIONS

- Use as flexible sheer rod with Flex Rod.
- Create custom curtain rods by bending on site.
- Use with arch rod mounting accessories to create custom treatments.
- Rod will not shatter, turn brittle or yellow with age.

MADE-TO-MEASURE SURCHARGES

Bending charge	\$5.25 per bend
Continuous bend	\$1.00 per foot (\$8.00 minimum charge)
Crating curved rods	\$26.00/crate

QUALITY NOTES

CUT-TO-MEASURE 9-300 SERIES

- .0279 Steel.
- For traverse rod installations of average weight and width. For fabric weight specifications, see page 79.
- Can be bent to 12" radius or continuously curved.

BALL BEARING PULLEYS operate smoothly and quietly. Compact pulley housing lets draperies stack closer to end of rod.

MOST CUT-TO-MEASURE RODS mount directly to ceiling by mounting screws through extra wide top flange of pulley housing and support stirrup.

OVAL CUT-TO-MEASURE 9-400 SERIES

- Ideal for heavy duty curtains, valances, and cafe rods.
- Doesn't close up when shirring.
- .0279 gauge steel.

Curtain Rod Application

REVERSIBLE ELBOWS allow a wide range of treatments since each elbow has a choice of two projections.

9-401

SASH BRACKET (9-409) for shirred cafe curtains hung close to window. End brackets secure rod to bracket by tightening end screw.

9-409

SPRING SOCKET (9-406) fits over oval rod. Use in recessed window applications. Spring pressure on rubber tips holds rod in place. Cutting allowance: 5". Maximum width 84".

9-406

OVAL VALANCE ROD TREATMENTS

Valance pinned over oval rod.

QUALITY NOTES

3/8" SOLID ROUND RODDING is sturdy, strong and versatile. Available in 12 foot lengths, brass finish. Easy to cut to desired size. Heavier weight; ideal for banners.

- Socket unscrews from gooseneck bracket for easy installation of rodding or tubing.

HEX HEAD SCREWS with washer heads are for general use with drapery hardware. Available in eight sizes. #6 screws are smaller in diameter to be used on brackets with smaller holes.

See page 44 for screws.

TEKS SCREWS require no pre-drilling and eliminate splitting or cracking of trim. Use on metal doors, aluminum window frames and wood.

See page 44 for screws.

9-600

MAGNETIC HEX HEAD SOCKET (9-897-0) Ideal for use with slotted hex head screws. Holds screw secure for single hand installation.

QUALITY NOTES

HOW TO ORDER:
For standard rod sets (single or double combination rods) specify:
QUANTITY: Total quantity of each specific type ordered.
NUMBER AS LISTED IN ITEM NUMBER
COLUMN: This number includes: code, item number and finish.
DESCRIPTION: Example "Heavy Duty Two-Way Traverse Set."
EXACT WIDTH: From outside to outside of brackets. (We make allowances where necessary.)
PROJECTION: (When choice of projections is offered.) **2¾-4¼" IS STANDARD.**

Stack and Control Locations

For curved rod sets specify:
QUANTITY: Total quantity of each specific type rod ordered.
NUMBER AS LISTED IN ITEM NUMBER
COLUMN: This number includes: item, code and finish.
DESCRIPTION: Example: "Heavy Duty Bay Window Set."
ROD WIDTH: The standard measurement for all rod lengths will be outside bracket to outside bracket.
PROJECTION: The listed projection of all rods will be the dimension from the face, or front of the rod, to the wall.
EXACT REQUIRED WINDOW MEASUREMENTS AS SHOWN IN DIAGRAM: We will make allowance for projection specified.

PROJECTION: (When choice of projection is offered.) **2¾-4¼" IS STANDARD.**
Drop from rod to floor for cord tension pulley.

QUALITY NOTES

CORD DRAW 9-650

Description: Super Duty Cord Draw System. Especially designed for motels, hotels and commercial buildings with extra strength master carriers and nylon wheels. Accommodates all three pleating systems. Front loading wheel carriers.

Advantages: Heavy duty construction, clean lines for easy mounting. Uses nylon rollers or slide carriers. End pulleys have large ball bearing pulley wheels $\frac{7}{8}$ " diameter. Holds largest amount of drapery weight: 60 pounds one-way, 120 pounds two-way.

CORD DRAW 9-650

Max. Fabric Weight 2.5 lb./ft.
Max. Track Lengths..... 60 lb. & 24 ft.-1 way
120 lb. & 48 ft.-2 way

Can be continuously curved. Can be curved to any angle using 12" radius. Can reverse curve with limitations.

Pleat System Roll Pleat
Stack Pleat
Pinch Pleat

DRAPERY LINERS

Double sided swiveling snap pendants, standard with Super Duty Slimline track, are designed to carry two separate drapery panels. Room-facing draperies snap into the front of the pendants, while liners snap into the back.

QUALITY NOTES

BATON DRAW 9-657

Description: Super Duty Baton Draw. Especially designed for motels, hotels, dormitories and commercial buildings with rolling carriers to provide maximum sturdiness for heavier weight drapery. Will accommodate three pleating systems – roll, stack and pinch.

Advantages: Carries more weight without losing smooth efficiency. Use for ceiling or wall mount. Comes in custom-measured assembled sets.

Front loading rolling or sliding carriers. Baton on outside of draperies.

BATON DRAW 9-657

QUALITY NOTES

ARCHITECTURAL TRACK CUTTING ALLOWANCE

Cutting Track Allowance	Assembly	
Super Duty Slimline	Two-Way cord draw	5"
	One-Way cord draw	2½"
	Baton draw	¼"
Contrack 9-804	Two-Way cord draw	6"
Contrack 9-804	One-Way cord draw	3"
Contrack 9-808	Baton draw	
9-8191	Baton draw	0

Deduct the cutting allowance from the rod width to determine the **cut rod length**. Cutting allowance accommodates pulley housings.

STACK PLEAT SNAP TAPE spacing determines the width of drapery stacking and projection depth. Fullness is determined by drapery fabrication.

Tape Spacing	Recommended Use
7½"	Short, lightweight draperies
8½"	Normal weight draperies

ROLL PLEAT DRAPERIES use connected snap carriers with 4¼" on center snap tape. Carrier spacing determines fullness and stack back. Recommend a 1" heading.

Carrier Spacing	Fullness
2⅝"	80%
2⅞"	100%
1⅞"	120%

SNAP-TAPE systems reduce installation time and cut maintenance costs. Nylon tape with snaps need not be removed for cleaning. High pull force (9-461) snaps detach and release with a 36 lb. sheer pull. Low pull force (9-463) snaps detach and release with a 18 lb. sheer pull.

CONNECTED CARRIERS are used with Roll Pleat draperies. The carrier spacing determines the drapery fullness and stackback width. Cord is polyester; wheels are nylon; carriers are acetate.

ROLLING SWIVEL CARRIERS available on Super Duty Slimline systems provide for smooth traversing, even with heavy drapery loads. Wheels are nylon; carriers are acetate.

QUALITY NOTES

PINCH PLEAT is the traditional pleated drapery look, preferred for original or replacement draperies in residences. Used institutionally, pinch pleat draperies can bring a measure of homelike warmth to otherwise impersonal surroundings.

Recommend use of horseshoe clip 9-396 with pinch pleat draperies.

For horseshoe clip, see page 63.

HOW TO ORDER C-T-M TRAVERSE RODS

STANDARD ROD SETS (Single or Double Combination Rods)

Specify:

1. QUANTITY: Total quantity of each specific type rod ordered.
2. NUMBER AS LISTED UNDER ROD SET ILLUSTRATIONS: This number includes: code, item number and finish. Note that separate numbers are listed for similar sets of Heavy Duty and Regular cut-to-measure rods.
3. DESCRIPTION: Example – “Heavy Duty Two-Way Traverse Set.”
4. EXACT WIDTH: From outside of bracket to outside of bracket. Allowances are made where necessary.
5. PROJECTION: When choice of projections is offered.
6. Measurement from rod to floor for cord tension pulley.
7. Stack and control location.

CURVED ROD SETS

Specify:

1. QUANTITY: Total quantity of each specific type rod ordered.
2. NUMBER AS LISTED UNDER ROD SET ILLUSTRATIONS: This number includes: code, item number and finish. Note that separate numbers are listed for similar sets of Heavy Duty cut-to-measure rods.
3. DESCRIPTION: Example – “Heavy Duty Bay Window Set.”
4. EXACT REQUIRED WINDOW MEASUREMENTS AS SHOWN IN DIAGRAM WITH SET LISTING. Graber® will make allowance for projection specified.
5. PROJECTION: When choice of projection is offered.
6. Measurement from rod to floor for cord tension pulley.
7. Stack and control location.

CORD TENSION PULLEYS

Graber 8-655 or 8-658 cord tension pulleys are recommended for all Graber cut-to-measure assembled sets. For heavier duty applications, use 8-648 metal ball bearing cord tension pulleys.

FIGURING ROD WIDTH

Always give measurement “A” from outside to outside of brackets. Graber will make necessary allowances.

CUTTING ALLOWANCE

Cut-to-measure rodding must be cut slightly shorter than the overall rod extension measurement to allow for brackets and pulley housings. The difference between these measurements is the “Cutting Allowance.”

CUSTOM ROD CUTTING ALLOWANCE

ROD	ASSEMBLY	CUTTING ALLOWANCE
9-200 Heavy Duty	Two-Way draw	3½"
	One-Way draw	1½"
	Hand draw	-
9-300 Regular Duty	Two-Way draw	3½"
	One-Way draw	1½"
	Hand draw	-
9-400 Oval	With reversible elbows	1½"
	Double rod with reversible elbows	3½" inside rod
	With sash bracket 9-409	1½" outside rod
	With spring socket 9-406	¼"
	With inside bracket 9-408	5"
		¼"

Deduct the cutting allowance from the rod width to determine the **cut rod width**. Cutting allowance accommodates pulley housings.

SECTION 10

MADE-TO-MEASURE RODS - SPECIFICATIONS

HEAVY DUTY (9-200)

TWO-WAY 9-200 track using 9-213 pulley set with 9-105 masters, 9-346 slides (4 per ft.), 9-041 #4 traverse cord, 8-655 tension pulley, 9-231 center support and 9-125 end brackets. Cutting allowance for two-way 3½".

ONE-WAY LEFT/ONE-WAY RIGHT 9-200 track using 9-213 pulley set and 9-212 end pulley with 9-108 master, 9-346 slides (4 per ft.), 9-041 #4 traverse cord, 8-655 tension pulley, 9-231 end support, also used as center supports on longer rods, one 9-125 bracket. Cutting allowance for one-way 1¾".

REGULAR DUTY (9-300)

TWO-WAY 9-300 track using 9-313 pulley set with 9-310 masters, 9-346 slides (4 per ft.), 9-043 #4 traverse cord, 8-655 tension pulley, 9-332 center support and 9-125 end brackets. Cutting allowance for two-way 3½".

ONE-WAY LEFT/ONE-WAY RIGHT 9-300 track using 9-313 pulley set and 9-316 end pulley with 9-312 master, 9-346 slides (4 per ft.), 9-043 #3¼ traverse cord, 8-655 tension pulley, 9-332 end support, also used as center support on longer rods, one 9-125 end bracket. Cutting allowance for one-way 1¾".

SLIMLINE SUPER DUTY

TWO-WAY SUPER DUTY 9-650 track using 9-350 & 9-351 pulley with 9-356 & 9-357 butt masters, or 9-355 & 9-354 overlap masters, 9-383 & 9-345 snap carriers, or connected carriers of specified fullness, 9-041 #4 traverse cord, 8-655 tension pulley. (Brackets purchased separately.) Cutting allowance for two-way 5".

ONE-WAY LEFT/ONE-WAY RIGHT SUPER DUTY 9-650 track using 9-351 (9-350 one-way right) pulley and 9-353 end pulley with 9-356 (9-357 one-way right) butt master or 9-354 (9-348 one-way right) overlap master, 9-383 w/9-345 swivel snap pendants or connected carriers of specified fullness, 9-041 #4 traverse cord, 8-655 tension pulley. (Brackets purchased separately.) 2½" cut allowance.

BATON DRAW SUPER DUTY 9-657 track using 9-386 end caps with 9-387 & 9-388 overlap masters, 9-383 with 9-345 snap pendant, or connected carriers of specified fullness, 8-637 baton. (Brackets purchased separately.) ¼" cut allowance.

CONTRACK®

TWO-WAY 9-804 track using 9-823 pulley set with 9-819 masters, 9-840 ball bearing carriers, 9-039 #5 traverse cord, 8-648 tension pulley. (Brackets purchased separately.) 6" cut allowance.

ONE-WAY LEFT/ONE-WAY RIGHT 9-804 track using 9-823 pulley set, 9-826 insert pulley with 9-820 master, 9-840 ball bearing carriers, 9-039 #5 traverse cord, 8-648 tension pulley. (Brackets purchased separately.) Cutting allowance 3".

TWO-WAY BATON DRAW 9-8191 track using the 9-165 end stop with the 9-821 overlap masters, 9-840 ball bearing carriers, 8-635 baton. (Brackets purchased separately.) Cutting Allowance: 0".

TWO-WAY BATON DRAW WITH RETURNS 9-8191 track using the return/extendors 9-170 (right) and/or 9-171 (left) with the 9-821 overlap masters, 9-840 ball bearing carriers, 8-635 baton. (Brackets purchased separately.) Cutting Allowance: 0".

ONE-WAY BATON DRAW 9-8191 track using the 9-165 end stop with the 9-822 overlap master, 9-840 ball bearing carriers, 8-635 baton. (Brackets purchased separately.) Cutting Allowance: 0".

ONE-WAY BATON DRAW WITH RETURNS 9-8191 track using the return/extendors 9-170 (right) and/or 9-171 (left) with the 9-822 overlap masters, 9-840 ball bearing carriers, 8-635 baton. (Brackets purchased separately.) Cutting Allowance: 0".

CUBICLE 9-808 track using the 9-165 end stop and the 9-849 ball bearing carrier with hook. (Brackets not available.) Cutting Allowance: 0".

FLEX ROD

TWO-WAY cut allowance 3¼".

ONE-WAY cut allowance 1¾".

RESTRINGING AND CORD DIAGRAMS

RESTRINGING A TRAVERSE ROD

- 1. Determine the length of new cord needed.** Measure the rod width and cord drop and add together. Double that number to get the cord length.

- 2.** Feed cord end up through pulley housing at position 1 and lock off (tie off) on the overlap master carrier position 2.
- 3.** Take other end of cord and feed up through and around end pulley 3. Pull across rod and around end pulley 4 back to overlap master carrier position 5. Determine final cord length. Tie off cord at position 5 and cut away excess cord.
- 4.** Center master slides. Take the top cord and secure at position 6 on the underlap master carrier.
- 5.** For a one way rod the underlap master carrier is not used. All other steps remain the same.

CORD DIAGRAMS FOR SPECIAL APPLICATION TRAVERSE RODS

Double Master Carriers

Double Insert Pulleys - Multiple Draw

CONVERTING A TRAVERSE ROD TO ONE-WAY DRAW For Decorative and Super Heavy Duty Traverse Rods.

- 1. Determine number of slides required.** Count the number of pleats in the drapery panel and subtract two.
- 2. Pull rod sections apart.** First pull the cord loop out of the left master carrier locking tab. Pull the inner and outer rod sections apart and remove the left master carrier.

- 3. Remove any excess slides.**

- 4. To stack draperies to the right:**

A. Remove slides from the left side. Place all slides to the right of the master carrier.

Standard
Traverse

Decorative
Traverse

Right
Stack

Arm left to stack right.

B. Remove the master carrier overlap arm and reattach it to the last hole on the left.

- 5. To stack draperies to the left:**

A. Remove slides from right side. Place all slides to the left of the master carrier.

Standard
Traverse

Decorative
Traverse

Left
Stack

Rotate arm right to stack left.

B. Remove the master carrier overlap arm. Rotate it to the left and reattach it.

- 6. Telescope rod sections together.**

The International System of Units (Système International, SI) is the modernized version of the metric system, established by international agreement to provide a logical and interconnected framework for all the measurements in science, industry, and commerce.

Item Width	Metric	Item Width	Metric
6-11	15-28 cm	30-48	76-122 cm
7-11 $\frac{1}{2}$	18-29 cm	36-60	91-152 cm
8-11	20-28 cm	36-63	91-160 cm
11-18	28-46 cm	38-66	97-168 cm
11 $\frac{1}{2}$ -20	29-51 cm	40-86	102-218 cm
12-21	30-53 cm	48-84	122-213 cm
14-24	36-61 cm	60-156	152-396 cm
16-24	41-61 cm	66-120	168-305 cm
18-28	46-71 cm	84-120	213-305 cm
18-46	46-117 cm	84-144	213-366 cm
20-36	51-91 cm	84-156	213-396 cm
21-38	53-97 cm	100-180	254-457 cm
22-36	56-91 cm	130-240	330-610 cm
24-36	61-91 cm	156-228	396-579 cm
28-40	71-102 cm	228-312	579-792 cm
28-48	71-122 cm		

LINEAR CONVERSION:

10 millimeters (mm) = 1 centimeter (cm)
 10 centimeters (cm) = 1 decimeter (dm)
 10 decimeters (dm) = 1 meter (m)
 1 inch (in) = 2.54 centimeters (cm)

BRACKET GUIDE

BRACKET SPACING - ROD WIDTH

The number of brackets and center supports used is directly related to the type of rod used, the width of the rod, and stackback requirements.

STACKBACK

To allow as much light as possible and give an unobstructed view, draperies ordinarily stack outside the glass area of the window. Add the stackback to the glass width to get the rod width. For two-way draw rods, divide stackback by two and install brackets this distance on each side of glass.

The amount of stacking space needed will vary depending on the thickness of the fabrics being used, and the fullness at which they are sold. The following formula should be used only as a guideline:

To determine your rod bracket to bracket measurement that allows the drapery to stack off the window:

1. Measure the width of the areas to be cleared.
2. Multiply that number by 1.5.
3. The resulting number is your new rod bracket to bracket. Add the appropriate overlaps and returns for your finished drapery width.

Example:

Area to be cleared is 72".

Multiply 72 by 1.5 = 108. This is your rod width to stack the draperies off the window.

Add returns and overlap for your finished width.

CLEARANCE

Allow for both side clearance and front clearance when installing over another treatment. This allows for operation of the undertreatment.

POLE SET MOUNTING

Pole sets or wood poles typically extend beyond the window frame 6-18". Place center supports equidistant between end brackets.

BRACKET HEIGHT - DRAPERY LENGTH

Brackets are typically mounted so that the top of the draperies are 4" above the glass. Allow ¼"-½" for clearing window sill or floor. The relationship between the drapery length and the installed rod height depends on the type and size of the rod. Decorative traverse rods and wood poles are designed so that the drapery heading hangs below the rod.

TOP SCREW POSITION - BRACKET ALLOWANCE

Knowing the drapery length (and bottom clearance) and the bracket allowance makes it easy to determine where to mount the brackets to get the proper rod height. The bracket allowance is the distance from the top screw of the bracket to the drapery heading. This dimension is given for many of the Graber® brackets in the Quality Notes of the appropriate rod category. Contact Graber Customer Service if you can't find the information you need.

GLOSSARY

A

Adjusted Starting Point – Place from which you measure the finished length. When heading starts below or above rod, measure from bottom of cafe ring.

Apron – Space below window extending to floor.

B

Baton – A rod or wand used to hand draw traverse draperies.

Bias Cut – Diagonal direction (45 degrees) of the fabric

Bracket – Metal or wood piece attached to the wall or casing to support a drapery or curtain rod.

Box Pleat – A fold of cloth sewn into place to create fullness in a drapery. Box pleats are evenly spaced and stitched.

Buckram – Stiff material used to make drapery heading. A 4" width is common. Also called crinoline.

C

Cafe Rod – A decorative rod used to mount cafe curtains that do not have a rod pocket. Cafe rods are meant to be seen and add an additional decorative touch.

Canopy – Created by sewing two pockets into fabric panels; rod with a small projection inserted at the top of the panel and rod with a larger projection inserted at the bottom.

Casing (Window) – Wooden frame around a window.

Center Draw – One pair of draperies which opens and closes exactly at a window's center point.

Center Support – Used to support a rod or pole to prevent it from sagging in the middle. Does not interfere with rod operation.

Clearance – Distance from wall to back of rod.

Cornice – A shallow, box-like structure, usually made of wood, fastened across the top of a window to conceal the drapery hardware.

Crinoline – Stiffening material similar to buckram used in drapery headings.

Custom-Made Draperies – Draperies made to order in a workroom or decorator shop.

D

Draw Draperies – Panels of fabric featuring pleated headings.

E

Ease – Allowance added to finished drapery width to allow panels to traverse easily. General rule is ½" per panel on Two-Way rod. Also called Give.

End Bracket – The two supporting metal grips which hold a drapery rod to the wall or ceiling. They control the amount of projection.

F

Finial – Decorative end piece on cafe rods or decorative traverse rods.

Finished Length – The distance from the finished top edge to the finished bottom edge of drapery panel. Includes allowances for poufs, rod take-up, etc.

Finished Width – The bracket to bracket width plus returns and overlaps.

Fullness – The ratio of the total fabric used less allowances for side hems and seams to the finished width of a drapery. The fuller the drapery, the smaller the spaces between each pleat.

G

Give – See Ease.

H

Heading – The hemmed, usually stiffened, portion across the top of a curtain or drapery.

Holdback – A decorative piece of hardware that holds draperies to each side of the window.

J

Jamb – Inside frame of a door or window.

L

Lining – A fabric backing for a drapery.

Lambrequin – A cornice that frames a window on the top and at the sides.

M

Master Carrier – The lead carriages in center of rod when draperies are closed.

Multiple Draw Rod – Traverse rod that allows each panel of a pair of draperies to be drawn independently.

O

One-Way Draw – Drapery designed to draw one way only, in one panel.

Overlap – The part of a pair of drapery panels which rides the master carrier of a traverse rod and overlaps in the center when draperies are drawn. Usually 3½" on each side.

P

Panel – One half of a pair of draperies or curtains.

Pin-On Hook – A metal pin to fasten draperies to a rod. It pins into drapery pleat and hooks to traverse carrier or cafe rod.

Pinch Pleats – A drapery heading where the basic pleat is divided into two or three smaller, equal pleats, sewn together at the bottom edge on the right side of the fabric.

Pin Setting – The distance between the top of the pleat and the top of the pin.

Pleat – A fold of cloth sewn into place to create fullness.

Pleater Tape – Pocketed heading material designed to be used with pleating hooks.

Projection – Distance from wall to front of rod.

R

Ready-Mades – Standard size draperies, factory-made and available at stores or through mail order sources.

Repeat – The space from one design motif to the next one on a patterned fabric.

Return – The distance from the face of the rod to the wall or casing where the bracket is attached. Amount of drapery that covers space between rod and wall.

Rod Cut Width – Equals the center to center spacing of end brackets mounting screws.

Rod Height – Distance from floor, sill, or apron to top of rod.

Rod Pocket – Fabric sleeve through which rod is shirred.

Rod Width (Traverse Rod) – Measured from outside, bracket to bracket.

Roll Pleat – A soft, rounded, pleating pattern that has equal beauty in the room or street side. See Slimline hardware systems.

S

Sash Curtain – Sheer material hung close to the window glass. Usually hung from spring tension rods or sash rods mounted inside the window casing.

Sash Rod – A small rod, either decorative or plain, usually mounted inside a window frame on the sash.

Scalloped Heading – A popular top treatment for cafe curtains featuring semi-circular spaces between curtain rings.

Sconce – Architectural style decorative bracket generally used to create simple swag treatments.

Sill – The horizontal "ledge-like" portion of a window casing.

Slides – Small runners installed in a traverse rod which hold a drapery pin or hook.

Stackback – The space required for draperies to clear the glass when they are completely opened. General rule is to add ½ of window width to allow for stackback.

Stack Pleat – An accordion-like pleat that has an equal beauty in the room or street side.

Starting Point – Point from which you begin measuring finished length.

Swag – Section of draped fabric used above a traditional window treatment.

T

Take-up – Distance the drapery is shortened when shirred through a rod pocket. Equal to thickness of rod. Added to finished length.

Tension Pulley – Pulley attachment through which the traverse cords move with continuous smooth operation when drapery is drawn. Mounted on baseboard, casing or wall, on one or both sides.

Tiebacks (Holdbacks) – Designed to hold draperies back from the window to allow light passage or add an additional decorative touch.

Total Width – The finished width times the fullness plus allowances for side hems.

Traverse – To draw across. A traverse drapery is one that opens or closes across a window by means of the traverse rod from which it is hung.

Two-Way Draw – Drapery designed to draw two ways from center, in two panels.

V

Valance – Horizontal decorative fabric treatment used at the top of draperies to screen hardware and cords.

W

Weights – Lead weights are sewn in at the vertical seams and each corner of drapery panel. Chain weights are strung in a line along the bottom hemline of sheers, to ensure an even hemline and straight hanging.

WARRANTY INFORMATION

DRAPERY HARDWARE LIMITED LIFETIME WARRANTY

OUR WARRANTY TO YOU

Once you are satisfied with your new Graber® drapery hardware and the way it is installed in your home, Springs Window Fashions warrants that your drapery hardware will be free from defects due to faulty workmanship or materials for as long as you own it.

OUR OBLIGATIONS TO YOU

Spring Window Fashions will repair or replace any defective Graber drapery hardware and mail the repaired or replaced items back to you anywhere in the continental United States at no charge.

WARRANTY LIMITATIONS

This warranty does not apply to defects caused by accident, alteration, improper use, abuse, neglect or failure to follow instructions for measuring, installing or using Graber drapery hardware.

FOR WARRANTY SERVICE

Contact your supplying distributor or write to:

Customer Service Center
Springs Window Fashions
Route 405 South, PO Box 8647
Montgomery, PA 17752

Include your name, address, a description of the problem, the date of purchase and the date and conditions under which the problem occurred. A bill of sale, cancelled check or similar record must be provided to verify the original purchase date.

DISCLAIMER

CONSEQUENTIAL, INCIDENTAL AND INDIRECT DAMAGES ARE EXCLUDED TO THE EXTENT PERMITTED BY LAW, WHETHER UNDER THIS LIMITED WARRANTY OR UNDER ANY WARRANTY IMPLIED BY LAW. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS MAY NOT APPLY TO YOU.

OTHER RIGHTS

This Warranty gives you specific legal rights. You may also have other rights which vary from state to state.

DRAPERY HARDWARE COMMERCIAL THREE-YEAR WARRANTY

WARRANTY

Spring Window Fashions warrants that your drapery hardware will be free from defects due to faulty workmanship or materials for a period of three years from the date of purchase.

OUR OBLIGATIONS

Spring Window Fashions LP will repair or replace any defective Graber drapery hardware and mail the repaired or replaced items back to you anywhere in the continental United States at no charge.

WARRANTY LIMITATIONS

This warranty does not apply to defects caused by accident, alteration, improper use, abuse, neglect or failure to follow instructions for measuring, installing or using Graber drapery hardware.

FOR WARRANTY SERVICE

Contact your supplying distributor or write to:

Customer Service Center
Springs Window Fashions
Route 405 South, PO Box 8647
Montgomery, PA 17752

Include your name, address, a description of the problem, the date of purchase and the date and conditions under which the problem occurred. A bill of sale, cancelled check or similar record must be provided to verify the original purchase date.

DISCLAIMER

CONSEQUENTIAL, INCIDENTAL AND INDIRECT DAMAGES ARE EXCLUDED TO THE EXTENT PERMITTED BY LAW, WHETHER UNDER THIS LIMITED WARRANTY OR UNDER ANY WARRANTY IMPLIED BY LAW. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS MAY NOT APPLY TO YOU.

OTHER RIGHTS

This Warranty gives you specific legal rights. You may also have other rights which vary from state to state. To the extent permitted by law, any implied warranties shall be limited to three years.
