MACHINE CONTROL

A complete range of tools are available to match customer applications and dozing automation needs.

1. **STABLE BLADE:** Complements the operator's blade-control input for attaining finish grades quicker with less effort.
2. **TRACTION CONTROL:** Automatically reduces track slip in poor underfoot and blade overloading conditions, improving productivity and surface finish quality.
3. **SLOPE INDICATE:** informs operators about the main-fall and side angle values. These are available in the main machine display.
4. **SLOPE ASSIST:** Helps operators more easily reach main-fall and slope targets by automatically maintaining the dozer blade's established blade angles. This feature does not require a base station, laser transmitter, design file, or additional hardware. It includes an upgraded machine display and an angle sensor on the blade.
5. **ATTACHMENT READY OPTION (ARO):** allows the machine to easily be upgraded to Cat Grade with 3D integrated grade control systems, or Accugrade GNSS, laser, or UTS blade mounted Grade Control Systems. ARO includes IMU sensors, EC520 controller, wiring, and mounting brackets. Upgrading to Cat Grade with 3D after build requires grade display, GNSS receivers and antennas, data corrections solutions, SITECH provided Grade license files, and Caterpillar provided SEA. SEA part #513-5980. Dealer to provide price for additional hardware and software.
6. **GRADE WITH 3D:** Cat GRADE with 3D is a factory installed, integrated grade control system with chassis mounted sensors and GNSS antennas mounted to roof of cab. Includes grade display, GNSS receivers and antennas, GRADE license files, and Caterpillar provided SEA. Additional requirements via CAT/SITECH Dealer include data corrections solution and measure up calibration.
