How InSite Alerting Works

IMPACT

An impact occurs, and the Player Unit five-zone sensor pad quantifies the impact.

ANALYZE

The instrumented helmet evaluates whether the hit is above the threshold levels.

TRANSMIT

If an impact or sequence of impacts exceeds a predetermined threshold, an alert is transmitted wirelessly from the Player Unit to the Alert Monitor.

ALERT

The Alert Monitor notifies sideline staff of the impact by player name and number.

ACT

Utilize actionable information during practices and games.

InSite alerts are based upon player specific thresholds

- PLAYER POSITION & PLAYER LEVEL
- SINGLE & MULTIPLE IMPACTS
- IMPACT LOCATION

InSite analyzes impacts and provides

KEEP YOUR HELMET GAME READY

RIDDELL RECOMMENDS THAT HELMETS ARE RECONDITIONED AND RECERTIFIED **ANNUALLY**

An updated NOCSAE standard went into effect in January 2017. Any helmet manufactured from that point forward is subject to these new recertification requirements.

Football helmets are now required to be recertified minimally every other year in accordance with manufacturers' warranty validation requirements to remain NOCSAE certified.

Annual reconditioning ensures that athletic equipment continues to meet performance standards.

SHOULDER PAD TECHNOLOGY

SHOULDER PAD TERMINOLOGY

Riddell® RipKord™

The RipKord shoulder pad removal system utilizes a release mechanism that is strategically integrated into the shoulder pad that allows for quick and easy removal and access to the player.

Air Management

Shoulder pad liner construction that attenuates impact energy on a cushion of air within semi-sealed chambers. Energy dispersion occurs through spreading the impact forces within a large volume of air slowly released from the liner at a controlled rate.

STAC System

Patented designed cap and epaulet system provides protection to the AC joint while allowing for maximum mobility.

Flat Pad Design

Shoulder pad design that sits low across the player's shoulder, minimizing interference with the rotational range of the helmet. Rigid belts route forces away from the point of impact by converting the entire arch into a large-scale, shock absorbing system.

Z-Fit Belting System

Attachment system using high-strength nylon clips to increase the ease of putting on and securing a shoulder pad.

Riddell. PHENOM

Model PHENOM AP Shown

Features

01 - Flat Pad Design

Shoulder pad design that sits low across the player's shoulder, minimizing interference with the rotational range of the helmet. Rigid belts route forces away from the point of impact by converting the entire arch into a large-scale, shock absorbing system.

02 - Air Management Liner

Shoulder pad liner construction that attenuates impact energy on a cushion of air within semi-sealed chambers. Energy dispersion occurs through spreading the impact forces within a large volume of air slowly released from the liner at a controlled rate.

Riddell. RIVAL JV

Features

01 - Corrugated Arches & Epaulets

Engineered design element which raises areas of the outer surface to create a stronger structure. Thus allowing the component to be thinner for weight reduction.

02 - Flat Pad Design

Shoulder pad design that sits low across the player's shoulder, minimizing interference with the rotational range of the helmet. Rigid belts route forces away from the point of impact by converting the entire arch into a large-scale, shock absorbing system.

03 - Integrated Deltoid Pads

Open cell foam piece that protects the deltoid muscle during contact.

Additional Features:

- + Removable / Adjustable Bodies
- + Streamline Caps
- + Short Arches
- + 1" PVC Belts
